SUMMARY

Dartmouth MEM candidate and Data Engineering Analyst with 2 years at BlackRock, targeting Associate Product Manager (APM) and Product Manager roles across data, AI, and fintech. Owned database and Azure cloud migrations to 100% break-free rollouts and shipped data products at scale (98% latency cuts, 92% faster processing), pairing product strategy, roadmapping, and cross-functional stakeholder management with hands-on data engineering and Agile, data-driven delivery.

EDUCATION

Dartmouth College | Master of Engineering Management

Hanover, NH • Sep 2026 – Nov 2027

Coursework: Product Design & Development, Technology Assessment, Data Analytics, Technology Project Management, Marketing, Organizational Behavior, Statistics

Manipal Institute of Technology | B.Tech, Data Science; Minor in Finance & Risk Analytics

Manipal, India • 2020 – 2024

GPA: 3.89 / 4.0

Coursework: Data Analytics, Machine Learning, Deep Learning, NLP, Statistics, Finance & Econometrics, Multivariate Analysis, DBMS

SKILLS

Product & Strategy: Product Management, Product Strategy, Product Roadmapping, Requirements Gathering, Stakeholder Management, Cross-functional Leadership, Agile / Scrum, JIRA, Data-Driven Decision-Making, Experimentation, KPIs & Metrics

AI & ML: LLMs, RAG, GPT-4, Machine Learning, Deep Learning, NLP, Computer Vision, Model Quantization, PyTorch, XGBoost, CatBoost, OpenCV, FastAI

Data Engineering & Platforms: Snowflake, Apache Spark, Kafka, Hive, Iceberg, Hadoop, HDFS, Azure, MSSQL, Sybase, ETL Pipelines, Flink, Data Lineage, Data Governance, Data Validation, RBAC, CI/CD

Programming: Python, SQL, R, Go, C++, C#, Java, Perl, Bash, NoSQL, PySpark, PyArrow, DuckDB, Git, Jupyter

Analytics & BI: Tableau, Power BI, Splunk

EXPERIENCE

BlackRock

Mumbai, India

Data Engineering Analyst

Jul 2024 – Aug 2026

- Owned and scoped the end-to-end migration of Aladdin's observability platform (Sybase → MSSQL), setting the roadmap and breaking 10,000+ lines across codebases, configuration, and ETL metadata into a sequenced plan delegated across a team of 12 analysts.
- Defined the acceptance criteria for a risk-free cutover, driving a toggle-free migration library and a validation framework that regression-tested 700+ metadata files before and after cutover to deliver a 100% successful rollout with no production breaks.
- As feature owner, drove the on-premises → Azure migration of the observability pipeline, coordinating Hadoop, Splunk, and database teams to move 200+ client-facing Tableau and Splunk dashboards at 0% data loss — cutting historical-board processing time 92% and lifting real-time event timeliness 84%.
- Identified a cross-team need for shared data lineage and shipped Hive views and lineage timeline visualizations adopted as the primary source of truth across 3 teams, backed by config-driven transformations consuming 100% of real-time security-level events.
- Prioritized a metadata-driven ingestion framework that cut client-facing Tableau dashboard latency 98% (T-2 days → 2 hrs), giving business users near-real-time reporting and reclaiming 6 hours of SLA while preserving data integrity with deduplication logic.
- As feature owner, scoped and delivered SCD2 framework enhancements that raised Spark read/write performance 73% and added configurable historical tracking and partitioning, onboarding 5 new datasets to the platform.
- Drove a performance initiative across 20+ Spark datasets (partition tuning, filter pruning, write-mode optimization), achieving a 90% resource reduction per dataset and a 55% aggregate drop in cluster utilization with zero data loss during the cloud migration.
- Delivered a metadata-driven Snowflake loader enabling bidirectional migration between Snowflake and the data lake (Hive & Iceberg), landing a 100% successful rollout with integrated role-based access controls.
- Served as the sole point of contact between engineering and business for all Spark-based pipelines as Historical Pipeline SME — translating business needs into technical priorities, leading cross-functional teams, mentoring 3 junior analysts, and cutting infrastructure failures 76%.
- Improved delivery velocity and reliability by automating CI/CD validation scripts (~90% PR-review effort) and shipping a Splunk-based job tracker whose real-time alerts eliminated T-1 latency in job-failure detection.

Data Engineering Intern

Jan 2024 – Jun 2024

- Owned product management for a GPT-4-powered data copilot that let analysts query 9 datasets in natural language, defining requirements and prioritizing a RAG architecture that drove answer accuracy to 97% (data loading automated with PyArrow).
- Cut system boot-up time 94% (7+ hrs → <10 mins) by consolidating 13K+ scheduled tasks into 4 optimized cycles, shortening the client risk-analytics production lifecycle by one hour.
- Improved system reliability with automated monitoring across 15 critical settings at 100% error-detection accuracy, cutting manual intervention 80% and production issues 20%.

MIT Manipal, Data Science Dept. | Undergraduate Researcher

Manipal, India • Oct 2022 – Sep 2023

- Built channel-attention modules and deep-learning models for activity recognition and context-aware navigation ("Smart Collared Eye"), improving prediction accuracy 80%.

Intel | Deep Learning & Computer Vision Intern

Pune, India • May 2023 – Jul 2023

- Optimized YOLOv5 inference with OpenVINO for real-time video, cutting inference time 40% and improving throughput 60% for social-distancing detection.

Navana Tech | Computational Linguist Intern

Mumbai, India • Dec 2022 – Feb 2023

- Preprocessed 2TB+ of audio with TorchAudio to establish data-validation baselines; achieved 83% accuracy in multilingual speaker validation, extending the system to Marathi & Kannada across five dialects each.

PROJECTS

- **Vigilance Vision:** Defined requirements and roadmap with law-enforcement stakeholders for a real-time crime-detection system (OpenCV, FastAI); trained and quantized a ResNet50 to 98% accuracy for edge deployment.
- **Credit Risk Modelling:** Built a Flask application predicting loan eligibility at 93% accuracy using CatBoostClassifier.
- **Hate Speech Detection:** Text-classification web app (XGBoost, TF-IDF) at 93.7% accuracy / 0.9 F1; added LIME interpretability and benchmarked BERT & LSTM.

AWARDS & ACHIEVEMENTS

- Patent pending: System for integrating big data storage with quantum-safe encryption technologies (2023).
- Presented “Knock Knock: Through the Lens of Classification” on indoor activity recognition at ICCMEH '23.
- 3rd Place, KAVACH Cyber Security Hackathon (Government of India), 2023; Top 30 of 700 teams, TS NASSCOM Hackathon, 2023.
